

One of Seven Things to Do With

OOZEQ

Play ... soft, stretchy, weird

Like silicone putty and salt dough, Oozeq may be used as a soft, stretchy, weird toy.

Like salt dough and other air dry clays, Oozeq may be made into various forms, squished into any shape imaginable, rolled flat, molded and extruded.

Like silicone putty, Oozeq slowly stretches, and stretches, and stretches. Also like silicone putty, Oozeq will tear or break cleanly if pulled apart quickly.

Oozeq sticks to itself most of all, and will generally not stick to other surfaces. Oozeq may build up on rough surfaces including hands, and then stick to itself. Using a little moisturizing hand cream helps prevent Oozeq build up on hands. Smooth plastic or rubber surfaces are also very resistant to Oozeq build up. Oozeq is a great adhesive for paper, wood and other materials chemically similar to Oozeq.
